

MEERA MEHTA

Full-Stack Developer

Angular, React, Node.js

Jaipur, India | meera.mehta@example.com | ROLE 01-04

FICTIONAL SAMPLE - all employers, qualifications and outcomes are illustrative and unverified.

EXECUTIVE SUMMARY

Full-Stack Developer with an illustrative 13-year career in product engineering and enterprise applications. Combines angular, react, node.js with disciplined documentation, practical coordination and clear communication. The sample career progresses from focused execution to independent workstream ownership, with responsibilities and boundaries described for each appointment.

Selected work includes service operations workspace, customer onboarding flow and inventory event dashboard. These examples explain the original problem, individual contribution, deliverables, review approach and remaining limitations rather than relying on unsupported headline claims.

Prepared for experienced full-stack developer opportunities requiring dependable delivery, thoughtful professional judgement and collaboration. The qualification narrative includes M.Tech in Software Systems. Every named organisation and outcome in this record is fictional; professional eligibility is not independently established.

AT A GLANCE

13 years ILLUSTRATIVE CAREER	4 CAREER APPOINTMENTS	3 WORK EXAMPLES	2 EDUCATION RECORDS
--	---	---------------------------------------	---

CORE COMPETENCIES

- Angular / React
- Node.js / NestJS
- TypeScript / PostgreSQL
- Docker / CI/CD

PROFESSIONAL MISSION

Turn a clear brief into dependable product engineering and enterprise applications work: understand the context, apply angular and react, record the evidence and explain the limitations before handover.

Career family: Software & Application Development | Snapshot: 2026-09-22

PROFESSIONAL EXPERIENCE / RECENT

Full-Stack Developer

Meridian Digital Systems (fictional)

Jul 2022 - Present | Jaipur, India

Independent ownership of scoped full-stack developer work, coordinating contributors and making review requirements explicit. Includes the first two selected work examples.

- Built a tenant-aware portal with request routing and audit history.
- Implemented validated forms and resumable onboarding APIs.
- Led brief clarification and prioritised work using angular, react and node.js. Raised unresolved constraints before committing to the next stage.
- Coordinated peer reviews and handover preparation; used a architecture decision record to distinguish completed work, assumptions and follow-up needs.
- Supported colleagues with practical examples of nestjs and maintained a concise learning record after important assignments.

Illustrative career responsibilities. Employer confirmation and underlying work records are not supplied.

Senior Full-Stack Developer

Northline Digital Systems (fictional)

Jul 2018 - Jun 2022 | Jaipur, India

Owned defined assignments and supported cross-functional coordination. Developed deeper practice in node.js and nestjs.

- Connected an event ledger to searchable transaction timelines.
- Translated incoming requirements into a sequenced plan and aligned responsibilities with the project or service owner.
- Applied typescript and postgresql to resolve delivery questions while maintaining source and decision notes.
- Introduced reusable working documents and reviewed exceptions with the responsible specialist rather than silently changing scope.
- Prepared a test and release checklist so the next team could understand the work and remaining questions.

Illustrative career responsibilities. Employer confirmation and underlying work records are not supplied.

PROFESSIONAL WORKING PRINCIPLES

- Trace user journeys through interface, service and data boundaries before implementation.
- Use small reviewable changes, automated checks and explicit rollback decisions.
- Separate personal contribution from team delivery and record operational limitations.

PROFESSIONAL EXPERIENCE / EARLIER

Full-Stack Developer

Cedarbridge Digital Systems (fictional)

Jul 2015 - Jun 2018 | Jaipur, India

Progressed from supported tasks to independently managed assignments, with review available for unfamiliar or higher-risk decisions.

- Handled recurring work involving angular and react using a documented preparation and review process.
- Supported customer onboarding flow by organising inputs, maintaining issue notes and incorporating reviewer feedback.
- Coordinated colleagues and internal stakeholders using concise status updates, clear questions and agreed next steps.
- Improved record consistency through docker and documented handover expectations.

Illustrative career responsibilities. Employer confirmation and underlying work records are not supplied.

Junior Application Developer

Cedarbridge Digital Systems (fictional)

Jul 2013 - Jun 2015 | Jaipur, India

Built practical foundations through supervised assignments, routine documentation and feedback from experienced colleagues.

- Assisted with angular and node.js within an agreed scope and escalated unfamiliar work.
- Prepared inputs and checked completeness before passing work to the responsible reviewer.
- Maintained task records and learned to communicate assumptions, constraints and observed problems clearly.
- Applied review feedback to subsequent assignments and developed a dependable working routine.

Illustrative career responsibilities. Employer confirmation and underlying work records are not supplied.

SELECTED CONTRIBUTIONS

Service operations workspace. Built a tenant-aware portal with request routing and audit history. The achievement is the described workstream contribution; independent outcome evidence is not supplied.

Customer onboarding flow. Implemented validated forms and resumable onboarding APIs. The achievement is the described workstream contribution; independent outcome evidence is not supplied.

Inventory event dashboard. Connected an event ledger to searchable transaction timelines. The achievement is the described workstream contribution; independent outcome evidence is not supplied.

SELECTED WORK / 01

Service operations workspace

P1 | Jan 2023 - Jun 2023 | FICTIONAL WORK EXAMPLE

Context. Fictional internal work programme in product engineering and enterprise applications; not a real client case study.

Problem. Teams tracked requests in disconnected spreadsheets.

Objective. Create a workable response to this issue through angular, explicit review criteria and practical documentation. Agree the boundaries before execution and retain unresolved points for follow-up.

Contribution and ownership. Full-Stack Developer; owned the stated workstream, not the full organisation or every collaborator contribution.

- Built a tenant-aware portal with request routing and audit history.
- Prepared the scope with the commissioning team, identified unresolved inputs and used angular to turn the brief into a sequenced work package.
- Applied react and node.js while coordinating reviews with the designated owner. Kept decision notes so collaborators could separate facts, assumptions and changes.
- Assembled the handover material, explained open limitations and agreed which items needed further review rather than presenting them as completed.

Methods. Angular / React / Node.js / NestJS

Deliverables. Service operations workspace - scoped brief; Service operations workspace - reviewed working package; Service operations workspace - handover and learning summary

Review. Reviewed the scoped output against the agreed brief, recorded exceptions and checked that key conclusions could be traced to observations. The review package calls for a architecture decision record and a named human reviewer.

Illustrative outcome: the team adopted a repeatable approach for service operations workspace, with clearer ownership and reviewable records. This is a fictional qualitative result; no real performance measurement or external acceptance evidence is supplied.

Suggested evidence (not supplied): architecture decision record; reviewed pull-request summary; test and release checklist.

SPECIALIST PRACTICE

Engineering judgement

The sample focuses on angular, react, node.js. Approvals, supervision and specialist input are identified in each work package; work outside this scope is referred to the designated responsible person.

Peer learning and practical guidance. Created short examples on angular and nestjs for colleagues. Separated personal preferences from agreed team procedures and recorded useful questions.

Review and handover discipline. Facilitated practical reviews of customer onboarding flow, ensuring that unresolved issues retained a named owner rather than disappearing from final presentations.

API boundaries, recovery behaviour, access control and release ownership are documented with each work example.

SELECTED WORK / 02 AND 03

Customer onboarding flow

P2 | Jan 2024 - Jun 2024 | Meridian Digital Systems (fictional)

Problem. Incomplete submissions required repeated follow-up.

Objective. Create a workable response to this issue through react, explicit review criteria and practical documentation. Agree the boundaries before execution and retain unresolved points for follow-up.

Ownership. Full-Stack Developer; owned the stated workstream, not the full organisation or every collaborator contribution.

- Implemented validated forms and resumable onboarding APIs.
- Prepared the scope with the commissioning team, identified unresolved inputs and used node.js to turn the brief into a sequenced work package.
- Applied nestjs and typescript while coordinating reviews with the designated owner. Kept decision notes so collaborators could separate facts, assumptions and changes.
- Assembled the handover material, explained open limitations and agreed which items needed further review rather than presenting them as completed.

Methods. React / Node.js / NestJS / TypeScript

Delivered. Customer onboarding flow - scoped brief; Customer onboarding flow - reviewed working package; Customer onboarding flow - handover and learning summary

Illustrative outcome: the team adopted a repeatable approach for customer onboarding flow, with clearer ownership and reviewable records. This is a fictional qualitative result; no real performance measurement or external acceptance evidence is supplied.

Suggested evidence (not supplied): architecture decision record; reviewed pull-request summary; test and release checklist.

Inventory event dashboard

P3 | Jan 2019 - Jun 2019 | Northline Digital Systems (fictional)

Problem. Users could not explain stock adjustments.

Objective. Create a workable response to this issue through node.js, explicit review criteria and practical documentation. Agree the boundaries before execution and retain unresolved points for follow-up.

Ownership. Full-Stack Developer; owned the stated workstream, not the full organisation or every collaborator contribution.

- Connected an event ledger to searchable transaction timelines.
- Prepared the scope with the commissioning team, identified unresolved inputs and used typescript to turn the brief into a sequenced work package.
- Applied postgresql and docker while coordinating reviews with the designated owner. Kept decision notes so collaborators could separate facts, assumptions and changes.
- Assembled the handover material, explained open limitations and agreed which items needed further review rather than presenting them as completed.

Methods. Node.js / NestJS / TypeScript / PostgreSQL

Delivered. Inventory event dashboard - scoped brief; Inventory event dashboard - reviewed working package; Inventory event dashboard - handover and learning summary

Illustrative outcome: the team adopted a repeatable approach for inventory event dashboard, with clearer ownership and reviewable records. This is a fictional qualitative result; no real performance measurement or external acceptance evidence is supplied.

Suggested evidence (not supplied): architecture decision record; reviewed pull-request summary; test and release checklist.

EDUCATION AND SPECIALIST LEARNING

M.Tech in Software Systems

Asterbridge Institute of Professional Studies (fictional institution)

Jul 2011 - May 2013 | completed - fictional record

Focus: Angular, React, NestJS. Specialist study on service operations workspace; an illustrative learning project, not a published result.

B.Tech in Computer Science

Cedarhaven College of Applied Studies (fictional institution)

Jul 2007 - May 2011 | completed - fictional record

Focus: Node.js, TypeScript, PostgreSQL. Applied coursework in angular, documentation and reviewed practical assignments.

CONTINUING PROFESSIONAL DEVELOPMENT

Distributed systems design studio (2023). Angular and nestjs in the context of full-stack developer work. Used reflective exercises and a bounded practice example related to service operations workspace.

Secure application delivery workshop (2024). React and typescript in the context of full-stack developer work. Used reflective exercises and a bounded practice example related to customer onboarding flow.

Accessible interface review (2025). Node.js and postgresql in the context of full-stack developer work. Used reflective exercises and a bounded practice example related to inventory event dashboard.

Provider for these illustrative learning records: Meridian Professional Learning Studio (fictional). Not a licence or certification.

LANGUAGES AND WORKING PREFERENCES

English and Hindi - professional working proficiency in this fictional record.

Work arrangement: hybrid; remote feasibility discussed per role. Relocation: open to discussion - sample preference. Availability: not confirmed; discuss before an interview.

CREDENTIAL AND EVIDENCE STATUS

API boundaries, recovery behaviour, access control and release ownership are documented with each work example. Synthetic qualification and institution names illustrate profile fields only; they are not a validated qualification route or recognised accreditation claim. No real referee, endorsement, award, publication, membership or licence is supplied.

Use for templates, product demonstrations and test data only. Replace fictional claims and remove the demo label only after approval of real candidate information.

Contact placeholder: meera.mehta@example.com. No phone, live profile URL or verified reference is supplied.

Complete machine-readable data: profile.json. Interactive companion: portfolio.html. Reference CV used for structure only; this is not Ajay Prajapat's biography.
